Technical Skills

GenAI and Agentic Systems: LLM Agents, LangGraph, MCP, Multi-Agent Orchestration, Tool Calling
RAG and Retrieval: Hybrid Search, Re-ranking (Cohere), Qdrant, GraphRAG
LLMOps and Evaluation: Ragas, LLM-as-a-Judge, LangSmith Phoenix, Guardrails
Inference and Cost Optimization: vLLM, Quantization (GGUF), Prompt Caching, Model Routing
Cloud and MLOps: GCP Vertex AI, Model Registry, CI/CD for ML, Drift Detection, Triton Inference Server
Engineering: Python, FastAPI, Docker, SQL

Projects

MyHealthApp — AI-Powered Healthcare Assistant | *Node.js, Grok API, Vector DB, IndexedDB*

- Engineered a production RAG pipeline over a medical knowledge base, sustaining 120k+ queries/day at sub-800ms p95 latency through client-side caching and request deduplication
- Instrumented an LLM evaluation harness (automated assertion tests + human feedback loop) with hallucination guardrails, cutting unconstrained generation paths by 45% across 10k+ test cases
- Hardened an offline-first sync layer (IndexedDB to Firebase) with conflict resolution, cutting redundant API calls by 30% while maintaining consistency across 5k+ concurrent sessions

MeaningIt: On-Device AI Translation Engine | *TypeScript, Next.js, Google ML Kit*

- Shipped a fully on-device OCR + Speech-to-Text pipeline processing 25k+ translations/day for 500+ users, eliminating cloud round-trips and cutting response time by 60%
- Unified OCR and STT into a single translation flow, removing dual-interface friction and cutting 19% of drop-off at the mode-switch step
- Optimized inference cost by implementing an LRU cache with input-hash deduplication, cutting redundant inference calls by 30%
- Lifted 7-day retention by 25% via on-device-triggered re-engagement notifications through Firebase Cloud Messaging

Experience

Data & AI Automation Intern May 2024 – August 2024
Sunstone *Gurgaon, India*

- Engineered a custom ETL pipeline (Python) that cut data-processing latency by 94% (8 hrs → 45 min), replacing manual CRM sync with an automated, self-serve data flow
- Maintained 99.9% data integrity across enrollment funnels by designing lightweight automation with feedback-loop validation, applying guardrails for privacy compliance
- Reduced manual ticket triage time by 45% by deploying an LLM-powered automation layer that replaced static rule-based classification and manual SQL queries with intelligent intent detection and automated routing

Education

Vivekananda Global University Jaipur, Rajasthan
B.Tech in Computer Science; CGPA: 8.2/10.0 *2022 – 2026*

- Top 5% nationally (20/400+ teams) at Smart India Hackathon — built and shipped a full-stack AI prototype under a 36-hour constraint
- Coursework: Machine Learning, AI, NLP, Distributed Systems, Software Engineering

Achievements & Certifications

- **Naukri Campus Excellence Award**: Scored 97.69 percentile (Top 2.3% nationally) in software development assessment
- **AI Fundamentals (Accenture ASCEND)** — Data preprocessing, feature engineering, and production ML pipelines
